

Test, Measurement and Rehabilitation of, Proprioception, Dynamic Balance and Stability

What is unique in MED-SP300

Single point floor contact design, there is no unpredictable surface friction. Complete telemetry operation no cables or mechanical connections effecting the movement of the platform.

SP 300 is state of the art Dynamic Stability Platform. Two features of SP 300 make it unique:
Single point floor contact design (there is no unpredictable whole surface friction)
Complete telemetry operation.
(No cables or mechanical connections effecting the movement of the platform)

Platform have internal battery for operation. All system components fits inside a small carrying case that can be carr'ed by one person

All data are automatically recorded and stored to internal memory. Thanks to its wireless communication port,all data are transferred to computer online by using special software (included). Recorded data analyzed and special report is generated.
